Amendment to the claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

(Original) What is claimed is:

1. A fishing line bite detector alarm comprising:

(A) a first means for holding a fishing line, said means integrally including a slit for enabling resistance of forward and backward movement of said fishing line held within said means as the line is inserted further into the slit until the desired resistance of forward and backward line movement within said slit occurs, thereby allowing actuation of said means in response to forward and backward line tension, said means further integrally including a spherical pivot ball section for supplying forward and back rotational movement of said means in response to forward and backward line movement;

(B) a second means for luminating and sounding visible and audible alarm signals respectively;

(C) a third means for completing an electrical circuit
